

What Are the Benefits of This Upgrade?

This kit will allow you to easily upgrade your Reef Pure RO Systems 5 Stage system to a Reef Pure RO Systems 6 Stage system.

This is done by expanding the existing single DI resin stage bracket to a dual bracket and adding an additional DI resin stage to the system. As a 6 Stage System, you can always be sure that you have a full, non-exhausted stage of DI resin as a final stage, removing all traces of contaminants and impurities from your product water.

What Do I Need?

This kit includes everything that you will need to successfully upgrade your 5 Stage system to a 6 Stage system.

Please ensure that you have received all of the following parts:

- 1 x 10" x 2.5" Double Ring Filter Housing - Clear
- 1 x Double Filter Housing Bracket
- 1/4" Tubing - 1 Metre - White
- 1 x 570g Mixed Bed Colour Changing DI Resin

Useful Tools

- RO Tube Cutters or a Utility Knife

Before You Get Started!

Some reconfiguration of the system will be required to upgrade your 5 stage system to a 6 stage system.

If your system is a Reef Pure RO Systems 5 Stage system, then the current flow configuration would be as follows:

5 Stage System

Once the upgrade kit has been installed, the flow configuration will need to be as follows:

6 Stage System

Before Turning the System Back On...

Check all connections to ensure that all tubing is seated firmly in the push connect fittings. This will ensure that there is no chance of leaks.

Double check that your flow configuration has been changed correctly and now matches the diagram labelled '5 Stage System' beneath the 'Before You Get Started!' section of this user manual
